Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Totalm 1: Column 17-20; 33pp; English.

Claim 1: Column 17-20; 33pp; English.

This sequence is a novel rat protein p(H218), a member of the G-protein coupled receptor (GPR) superfamily of proteins. Several features of for the G-protein sequence for North and including; (1) seven regions of hydrophobicity which are predicted to act as membrane spanning domains: (1i) a consensus sequence for Northe divocayllation in the predicted condition and several serine and threonine residues in its predicted C-terminal domain. In addition, p(H318) contains many other residues which are condition in that it does not contain certain highly conserved residues. Perhaps most notable are the aspartate and tyrosine residues at the contain certain highly conserved residues. Perhaps most notable are the aspartate and tyrosine residues at the cytoplasmic end of the third transmembrane domain, and the cysteine residue at the extracellular end of the same transmembrane domain. The amino acid similarity between p(H218) and p(rat-edg) (W01664) suggests.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence encodes a fragment of the GTP-binding receptor which contains all seven transmembrane domains. The receptor protein occurs to the greatest extent in heart and lung tissue and to a lesser extent in the stomach and intestines. The peptide is therefore useful in the design and screening of candidate drugs, especially for the cardiovascular system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Receptor peptide for GTP-binding protein - can be used as a tool in design and screening of cardiovascular drugs Claim 2; Page 16-18; 27pp; Japanese.

Serotoninergic receptor SHTSb; 5-hydroxytryptamine; neuromodulator;
mouse serotonin receptor; neurological; cardiovascular; psychiatric;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     serotonin agonists and antagonists
Claim 5; Page 18; 27pp; French.
A human placental genomic DNA library was screened with the mouse
serotoninergic receptor 5HT5b CDNA (070264). A sequence coding for
the human 5HT5b receptor was identified (070265).
ulcer disease; chronic gastritis; diagnosis; envelope

Purply pc5 - involved in cell-cell adhesion and regulation activities

Example 3; Page 100-104; 146pp; English.

Example 3; Page 100-104; 146pp; English.

RN 1153 and RB 7154 represent possible alternatively spliced versions of the clone of the human protocadherin sequence, designated po43. The CDNA conciling these sequences were isolated after screening a human foetal brain cDNA library (contained within lambda2apil vectors), with 32P labelled versions of the sequences represented by T03605 and T03606. The most abundant spliced version of po43 is represented in T03622. The cytoplasmic domain of cadherin interacts with the cytoskeleton through cytoplasmic domain is not present in all cadherins, but in those which possess it, it is essential for the cadherins adherive function. The cytoplasmic domain appear to function via a different nethose with a cytoplasmic domain. These protein sequences are involved in cell-cell adhesion. This sequence may have regulatory functions in the cell, as well as the cell-cell adhesive properties.

Antibodies produced against these sequences are useful for modulating the binding activity of protocadherins, and can be used therapeutically.

Sequence 836 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     No Purple Cookering and regulating activities.

Example: Page 96-99: 114pp; English.

Two full length human cDNAs corresp. to the partial cDNAs of From human fetal brain cDNA library. Several overlapping cDNA clones were isolated with each probe including two cDNAs which contained the putative entire coding sequences of two novel professions designated protocadherin-42 (pc43) and protocadherin-43 (pc43). The DNA and deduced AA sequences of pc42 are in Q68997/R88906, while those of pc43 are in Q68998/R88907. Sequence clones contd. unique sequences at the 3' end. The analysis of various overlapping protocadherin cDNA clones revealed that some clones contd. unique sequences at the 3' end. The sequences forming the boundaries of the 3' end regions are consistent with the consensus sequence of mRNA splicing, suggesting the DNA and AA sequences of tone possible product of alternative splicing of pc42 mRNA are respectively presented in Q68909/R58911. The DNA and AA sequences of two possible products of alternative splicing of pc42 mRNA are respectively presented in Q68900/R58912 and Q69001/R4914.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7.7-APR-1995 (first entry)
Product of alternative splicing of human protocadherin-43 mRNA.
Cadherin; protocadherin; cell adhesion molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     / Match 4.1%; Score 95; DB 17; Length 836; Local Similarity 33.3%; Pred. comprising nucleic acid sequence encoding a GTP operably linked
recomprising nucleic acid sequence encoding a GTP operably linked
to control sequences recognised by transfected cells
claim 27; Fig 11; 58pp; English

A CDNA library was prepared in lambda gt10 from total cellular RNA
Cfrom CHO-FR4 cells. The library was screened with 3 probes (see
Cli149-C01151) based on highly conserved regions of the known rat
and human facilitative GTP sequences. One positive plaque was
identified (out of 150000), replated and screened with 2 of the 3
probes. Phage DNA was prepared from one of the positive plaques and
its 2.5kb cDNA insert excised using EcoRI. The insert was ligated
into PRKS and transformed into E.coli strain SRAIO! Recombinant
clones were picked for sequencing. The complete GTP-encoding
sequence was used to transform eukaryotic cells to allow them to be
fatty acids, metal lons, transferrin, serum and insulin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              THE NEW YEAR
                                                                                                                                                                                                                                                                                                                                                                                                                                              Polynuclectide(s) encoding human protocadherins pc3 and pc4 and rat polynuclectide(s) encoding human protocadherins pc3 and pc4 and rat pc5 - involved in cell-cell adhesion and regulation activities
Example 3; Page 79 84; 146pp. English.

This sequence represents a clone of the human protocadherin sequence, designated pc43. The CDNA encoding this sequence was isolated after careening a human foetal brain cDNA library (contained within lambdazapil crectors), with 32P labelled versions of the sequences represented by T0360s and T0360s. The cytoplasmic domain of cadherin interacts with the cytoplasmic domain is not present in all cadherins, but in those which possess it, it is essential for the cadherins adhesive function.

The cadherins which do not possess a cytoplasmic domain appear to function via a different method from those with a cytoplasmic domain.

This protein sequence is involved in cell-cell adhesion. This sequence may have regulatory functions in the cell, as well as the cell-cell adhesive properties. Antibodies produced against this sequence are useful for modulating the binding activity of protocadherins, and can be
                                                                                                                                                                                                  rat; cadherin; cell adhesion; mouse; fly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            N-F5DB, 08898.
N-F5DB, 08898.
Polynclectide sequences encoding new proto:cadherins - useful
for modulating natural binding and regulating activities.
Claim 14; Pege 78-81; 114pp; English.
Two full length human cDNAs corresp. to the partial cDNAs of
HUMAN-42 and HUMAN-43 (06898, 068982) were isolated
from human fetal brain cDNA library. Several overlapping cDNA
clones were isolated with each probe including two cDNAs which
contained the putative entire coding sequences of two novel
proteins designated protocadherin-42 (pc42) and protocadherin-43
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4

Serotoninergic receptor 5HT5b; 5-hydroxytryptamine; neuromodulator;
mouse serotonin receptor; neurological; cardiovascular; psychiatric;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            serotonin agonists and antagonists
Claim 1; Pages 17-18, 27pp; French.
Clidim 1; Pages 17-18, 27pp; French.
Serotonin receptors were used in PCR of mouse brain RNA in presence
of reverse transcriptase and the products were sequenced. One
product with homology to known receptors was labelled and used to
probe a CDNA library in Lambda UnizAP. The 2036 bp sequence 070264
domains which represents a novel serotonin receptor which was
designated 5HTSb (RS7066).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
(pc43). The DNA and deduced AA sequences of pc42 are in 06899/R58906, while those of pc43 are in 06899/R58907. The overall structures of pc42 and pc43 are similar to that of that overall structures of pc42 and pc43 are similar to that of typical cadherins but they do have distinct features. Both lack the prosequences that are present in all known cadherin precursors. The extracellular domains of pc42 and pc43 are different in length and pc42 contains seven subdomains that closely resemble the typical cadherin extracellular subdomain while pc43 has six such those of known cadherins or cadherin-related proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New serotoninergic receptor 5HT5b and related nucleic acid and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human activated leukocyte-cell adhesion molecule ALCAM.
Activated luckcyte-cell adhesion molecule; ALCAM; CD6 ligand;
thymic epithelial cell; inflammation; allograft rejection;
neurodegenerative disease.

                                                                                   4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DNA encoding human haematopoietic cell antigen proteins - useful as stem cell marker proteins in functional studies and for antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 8; Fig 4A; 17pp; English. However the control of 1897230 and HCAPFO.1 (1897231) are novel human haematopoietic cell antiqens associated with stem cells. They are the respective products of nucleic acid sequences HCASeq.1 (178819) and HCASeq.2 (178819) and HCASeq.2 (178819) and HCASeq.2 (178810) obtains and HCASeq.2 (178810) as tem cell marker proteins. The proteins are useful as stem cell marker proteins in functional studies, and can also be used to produce antibodies that allow the purification of stem cells from haematopoietic and other sources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Major intrinsic protein; vertebrate; lens fibre membrane; cell; communication; differentiation; cateracts; uveitis; mapping. DNA encoding it used as probe for human genome
Disclosure; Fig 7, 51pp; English.

The MIP sequence was deduced from the human MIP DNA sequence obtd. by screening ca. 500,000 recombinant phage plaques from a human genomic library in EMBL-3 with a bovine CDNA fragment contig. nearly the entire MIP gene coding sequence. MIP is specifically located in the lens fibre membrane of vertebrates and may play a role in lens fibre cell communication. MIP serves as a marker of lens fibre cell fibre cell communication in that its expression is developmentally regulated. Thus, anti-MIP antibodies can be used in an immunoreaction to be used for diagnosis of autoimmune diseases, i.e. uveitis. MIP DNA probes may be used in the mapping of the human genome. The human genome. The human genome and may be used in gene therapy to target the expression of any desired gene to the fibres of the ocular lens.

Tatinologies.

The amino acid sequence of the novel rat serotonin receptor MR22. The amino acid sequence of the novel rat serotonin receptor solicins of the amino acid sequence of the novel rates.

The amino acid sequence of the novel rat serotonin receptors are foreign as the entral carge of sensory, motor and behavioural functions in the central carvous system (UNS).

Serotonin receptors belong to at least two protein suptemblishes: G-protein - associated receptors containing 7 TMDs (S-TTIA). The serotonin receptors presented in the patent represent prototypes that fall into three new serotonin subfamily classifications: 5-HTIG-like (rat MR77 - 07227) and 5-HTIG-like (rat MR77 - 07227) and 5-HTIG-like (rat MR77 - 07227) and 5-HTIG-like (rat MR77 - 07228) and 5-HTIG-like (rat MR77 - 07228) and 5-HTIG-like (rat MR77 - 07228) and 5-HTIG-like (rat MR77 - 07227).

SHTS (subdivided into 5-HTIG-like (rat MR77 - 07228) and 1-HTIG-like (rat MR74 - 07228) and 1-HTIG-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

increase the productivity and extracellular secretion of esterases
                   Claim 3; Page 15-17. 29pp; English.

3 Different proteins (W05297-99) participate in the mechanism of secretion of esterase by Serratia marcesens ST41. They are encoded by an esterase secretory gene (T39662) that includes 3 open reading frames. The proteins can be produced by transformed host cells, pref. S. marceseens or E. coll, carrying wencor plasmids incorporating the esterase secretory gene. The esterase is secreted from the host cell, and is recovered from the culture medium and from within the cells. The esterase is useful in hydrolysis reactions.

Evidence for the frequent use of TTG as the translation
initiation codon of mitochondrial protein genes in the
nematodes, Ascaris suum and Caenorhabditis elegans.

Direct Submission

Direct Submission

Submitted (10-APR-1996) to the DDBJ/EMBL/GenBank databases. Hideo Kanoh, Sapporo Medical University School of Medicine, Department of Blochemistry: West-17, South-1, Sapporo, Hokkaido 060, Japan (E-mail:kanoh@serpent.cc.sapmed.ac.jp, Tel:011-611-2111(ax.2290), Fax:011-612-5861)

E 2 (bases 1 to 1212)

S Kai,M., Wada,I., Imai,S., Sakane,F. and Kanoh,H.
Identification and CONA cloning of 35-KDa phosphatidic acid phosphatase (type 2) bound to plasma membranes. Polymerase chain reaction amplification of mouse H202-inducible hic53 clone yielded the CDNA encoding phosphatidic acid phosphatase

Draft entry and sequence in computer readable form for [1] kindly provided by W.R.Jelinek, 28-JUL-1986.

The 4.5S RNA has a short half-life and appears to be associated with poly-A mixes in vivo. It is not a ribosomal RNA. There are approximately 850 copies of the 4.5S RNA gene per haploid mouse entribroleukemia cell genome. The DNA fragment presented here is a monomer unit of a tandem repeating array. The sequence contains an unusually high number of short tandem repeats (positions 75-119,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryotae; mitochondrial eukaryotes; Metazoa; Chordata;

*** SEQUENCING IN PROGRESS *** Caenorhabditis elegans cosmid T27E9;
870-950, 971-1011, 1148-1178, 1698-1767, 1803-1870, 2178-2242, 3081-3136, 3187-3277, 3562-3401 and 3765-3807) some of which are composed almost exclusively of either purines or pyrimidine saymmetrically distributed to one DNA strand. Others contain alternating purines and pyrimidines. The biological significance of these short tandem repeats is unknown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
